

# *INTERNATIONAL EQUATORIAL ELECTROJET YEAR NEWS*

## *AIM OF THE LETTER*

The aim of this letter is to report on the progress and the operations during the equatorial electrojet year in the African-European sector.

## *KORHOGO SITE*

The Franco-Ivoirian agreement about establishing the LETTI radar at Korhogo was signed on March 31, 1994.

The construction of the instrument is going on and its setting up is expected during the last quarter of 1994.

The interferometer shelter is now built, we have to adapt a cowling circuit before starting optical tests.

## *DATA BASE*

An update of the catalog for the Euro-African sector data base had been sent to the participants (see letter N°8).

The magnetic data network from November 1992 to March 1994 are available.

## *WORKSHOPS in 1994*

**Indian workshop**, Ahmedabad, May 10-12, 1994. We will not directly participate, but we shall communicate some results, also presented at the Japanese SENDAI Solar Terrestrial Energy Program, June 1994.

**IEEY European-African Working group meeting** is fixed on June 14 and 15 at St-Maur (near Paris), during the training period of the

three Ivoirian assistants (A.K. Toka, V. Doumouya and K. Boka). It will be an exchange of first look results, a confrontation with theoretical models and a discussion on the work in progress.

Dr. O. Fambitakoye (Abidjan/Ivory-Coast) and Dr. J. Vassal (Dakar/Senegal), will participate to this meeting.

## *FUTURE INTERSECTOR WORKSHOPS*

We are unhappy to have to cancel our project of a world-workshop at Abidjan during 1994. The priority of setting up operation and lack of funds will make such a meeting unfeasible.

The world meetings actually planned, are :

International school at Trieste -> February 1995

IAGA/Boulder/IEEY Workshop -> July 1995
